FOREWORD

Our irises are mostly of variegata origin. This is a hardy strain, as the home of the variegata is Hungary where climatic conditions are similar to those of eastern Nebraska and Iowa. They are adapted to the larger portion of the United States, but are not reliable in the warmer regions with little or no frost. In these sections they often fail to bloom or bloom on very short stems. The reason is that the variegatas are waiting for the approach of winter and as they usually start growth late in the year, they will be caught by the heat.

The variegata gives the entire color range of the bearded irises except blue. Hans and Jacob Sass used variegatas in their early experiments more frequently than any other pioneer breeders to obtain a wide color range. They used Trojana to overcome the dominance of low growth in the varigatas and gain height and infusion of Macrantha or Amas blood to increase the size of the bloom.

Plant irises in sunny, well drained locations. The rhizome, the botanical term for the creeping rootstock from which the true roots grow, should be placed just below the surface of the soil, making a hole sufficiently large to spread out the roots. Pack the soil around them, water and do not let them dry out until new growth has started. Point the growing points in the same direction when planting three or more rhizomes of the same variety. If, as so often done, they are pointed in opposite direction the result will be a clump with an open center which will not produce a solid mass of bloom. July and August are the best planting months, but they can be planted at any time the soil can be worked.

HEMEROCALLIS FROM NEBRASKA

The outstanding characteristics of the hemeracallis is its extreme hardiness and sturdy habit of growth. No insect nor disease has been known to destroy it and any location suits it. It is hardy anywhere when established.

Hemeracallis will be shipped in late August and September, after they have finished blooming and seed is harvested. They should be planted at the same depth as in the nursery; the bleached part of the plant will tell you how deep in the ground it was.

DOROTHY McDADE (Sass, H. P.)—Medium yellow, very late\$1.50

HESPERUS (Sass, H. P., 1933)—7-inch flowers, deep yellow, 4 feet, July and August\$1.50

MOONBEAM (Sass, H. P., 1940)—Creamy yellow, medium large, 5 feet stems. July and August\$1.50

NEBRASKA (Sass, H. P., 1937)—Cadmium yellow, 40 inches tall, July and August75c

ORANGE BEAUTY (Sass, H. P., 1944)—Flowers large, with broad segments, opening flat about 5½ inches. Color orange self. Very fragrant. 34 buds on 40-inch stems. July and August\$10.00

SUNNY WEST (Hans P. Sass, 1933)—Light yellow, 4 feet, July and August75c

STAR OF GOLD (Hans P. Sass, 1934)—7-inch flowers, 4 feet, July and August\$1.50

SUNNY DAY (H. P. Sass)—Spuria. Tall gleaming yellow self\$1.00

Owing to the expense of packing and shipping we cannot accept orders for less than One Dollar.

All orders are accepted subject to the condition and availability of stock at shipping time or being sold out. Early orders will be appreciated.

PEONIES FROM NEBRASKA

Peonies do best in rich soil. Use fertilizer or well rotted manure if your soil needs it, but do not allow fertilizer to come in direct contact with the roots. In planting, be careful not to cover the roots too deep; the eyes or buds should not be covered more than two inches. Peony roots are shipped after September 1st.
